## Fact Sheet

# CEOs vs. minimum wage earners

In 2005, Ontario's minimum wage **increased by 4.2%**, or \$624 for a full-time, full-year worker.

In 2005, the average CEO's salary in Canada **increased by 39%**, or \$2,525,180.

The average of Canada's 100 best-paid CEOs matched the average Canadian minimum wage worker's annual earnings by **40 minutes after noon on New Years' Day**.

An increase in the minimum wage to \$10.00 an hour would push that back to 1:50 pm in the afternoon on New Years' Day.

SOURCES Wage data, various studies cited in: Saunders, Ron "Does a Rising Tide Lift All Boats? # Raising the minimum wage isn't a *job killer*

Studies of actual experience with minimum wage changes find employment impacts are either **non-existent or negligible**. Why?

- ▶ The impact of minimum wages is so small relative to that of other changes in the economy that no impact is evident comparing before-after employment levels.
- ▶ Most minimum wage employment is in industries that serve local markets. As a result, individual employers will not be at a cost disadvantage relative to competitors when minimum wages increase.
- ▶ Studies designed to isolate the impact of minimum wage changes from other changes (state-to-state comparisons in the United States) find no difference in employment patterns between states in which minimum wages increased and states in which minimum wages did not increase.
